Software Development Plan

1. Introduction

*[The introduction of the **Software Development Plan** provides an overview of the entire document. It includes the purpose, scope, definitions, acronyms, abbreviations, references, and overview of this **Software Development Plan**.]*

1.1 Purpose

The purpose of this Software Development Plan is to define the strategy, schedule, and resources for developing the Arithmetic Expression Evaluator. It serves as the primary guide for our group (Group 5) to manage the development lifecycle from requirements to final delivery.

1.2 Scope

This plan covers the design, implementation, testing, and documentation of a C++ based arithmetic expression evaluator. It includes the development of a parser, an evaluator engine, and a command-line interface.

1.3 Definitions, Acronyms, and Abbreviations

CLI: Command Line Interface

Expression Parsing: Our program should be able to parse arithmetic expressions entered by the user, considering operator precedence and parentheses.

Numeric Constants: Recognizes and calculates numeric constants within the expression.

Operator Support: Implements support for the following operators:

- - (subtraction)
- % (modulo)
- * (multiplication)
- ** (exponentiation)
- / (division)
- + (addition)

Parenthesis Handling: Ensures that the program can handle expressions enclosed within parenthesis to determine the order of evaluation.

PEMDAS: Parentheses, Exponents, Multiplication, Division, Addition, Subtraction.

Unary Operators: Support unary – and +

1.4 References

- **External References**
 - Project Description: Saiedian, Hossein. EECS 348: Term Project in C++ - Arithmetic Expression Evaluator. Spring 2026

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

- User Manual
- **Vision Statement:** “To build a reliable C++ program that evaluates math expressions using PEMDAS rules. We aim to demonstrate strong software engineering skills by creating code that is clean, well-tested, and easy to understand.”

1.5 Overview

This Software Development Plan contains the following information:

- | | |
|--|---|
| Project Overview | — Describes the purpose, scope, and objectives of the project, including the specific deliverables and the constraints. |
| Project Organization | — Details the organizational structure of the project, defining specific roles and responsibilities assigned to each team member. |
| Management Process | — Outlines the project estimates, schedule, and milestones. It also describes the mechanisms for monitoring progress, managing requirements, controlling quality, and handling the risks. |
| Applicable Plans and Guidelines | — Contains references to additional standards, such as specific C++ programming guidelines |

2. Project Overview

2.1 Project Purpose, Scope, and Objectives

- **Purpose:** To develop an Arithmetic Expression Evaluator component for a larger compiler product being developed in C++.
- **Objective:** Develop a C++ program that parses and evaluates arithmetic expressions with support for nested parentheses and operator precedence.
- **Scope:** The system must handle integers and operators +, -, *, /, %, and **.

2.2 Assumptions and Constraints

- **Assumption:** Initial input will be integer constants only.
- **Constraint:** Must follow PEMDAS rules; Exponents are right-to-left associative.
- **Constraint:** Must be developed in C++ using object-oriented principles.

2.3 Project Deliverables

- i) **Project Plan** – 02/22/2026
- ii) **Requirements Document** – 03/15/2026
- iii) **Design Document** – 04/05/2026
- iv) **Project Implementation** – 05/07/2026
- v) **Project Test Cases** – 05/07/2026
- vi) **User Manual / README** – 05/07/2026

2.4 Evolution of the Software Development Plan

Version	Date	Milestone	Description
1.0	02/22/2026	Milestone 1	Initial release of the Project Plan.
1.1	03/01/2026	Milestone 2	Update following the completion of Requirements & Design phases.

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

1.2	03/22/2026	Milestone 3	Revision prior to Alpha (Parser) implementation.
1.3	04/12/2026	Milestone 4	Revision prior to Beta (Evaluator) integration.
2.0	05/07/2026	Milestone 5	Final version reflects the completed project and lessons learned.

3. Project Organization

3.1 Organizational Structure

- The project team will all convene to decide on any changes or decisions regarding the project. Any disagreement about the project or the direction we decide to go will be decided fully by our project manager Lea. The work will eventually be reviewed and approved by our class TA.

3.2 External Interfaces

- There will not be any other external interfaces the project group will be interacting with regarding developing the project; however, we will be submitting the project to our class TA for approval and grading.

3.3 Roles and Responsibilities

MEETING TIME: 4:00 PM Sundays 30–60 min Weekly – Zoom Meetings

Person/Contact Info	Unified Process for Education Role
Alex (913) 575-0714	<i>Requirements & Documents Lead</i>
Lea (913) 742-0306	<i>Project Manager</i>
Shashwat (704) 804-6410	<i>System Architect</i>
Jr. (901) 208-7966	<i>Front End Lead Developer</i>
Zack (913) 522-3941	<i>Back End Lead Developer</i>
Alec (913) 200-1518	<i>Quality Assurance</i>

4. Management Process

4.1 Project Estimates

Task	Hours
<i>Weekly Meetings (30 min x 6 weeks)</i>	3 hours
<i>Planning & Design</i>	5 hours
<i>Coding</i>	15 hours
<i>Testing</i>	10 hours
<i>Final Review</i>	2 hours
Total	35 hours

4.2 Project Plan

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

4.2.1 Phase Plan

Phase	Tasks	Duration
Planning	Design structure, assign roles, define functions	Week 1-2
Coding	Each member codes their assigned topics	Week 3-5
Testing	Test all modules, fix bugs	Week 6
Final Review	Put everything together, final checks	May 7

4.2.2 Iteration Objectives

Iteration 1 (Week 1-2) — Planning & Design

- Define program structure
- Assign roles to each team member
- Complete Project Plan
- Define all functions and how they connect

Iteration 2 (Week 3-4) — Coding

- **Jr:** Develops the CLI and input tokenizer
- **Zack:** Processes the Data Structure (tokenizer), apply PEMDAS, enforce associativity rules, process unary operators, and catch mathematical errors
- **Shashwat:** Designs the core data structure (tree and its nodes), defines program functions and architecture (connecting front and back-end functions), designs testing frameworks, and builds the main menu
- **Alec:** Builds the test cases
- **Alex:** Creates the Requirements Document, and outlines User Manual
- **Lea:** Monitors the project schedule, tracks completion, and leads weekly check-in meetings

Iteration 3 (Week 5) — Integration

- Combine all modules together into one program
- Make sure everything connects properly
- Fix any errors that come up

Iteration 4 (Week 6 - May 7) — Testing & Final

- Test all features of the program
- Fix any bugs found
- Final review and cleanup
- Submit by May 7

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

4.2.3 Releases

Release 1 — Demo Version (Week 5)

- Basic working version of the program
- Main menu is functional
- Most topics are coded and working
- Used to show progress to professor
- May still have some bugs

Release 2 — Beta Version (Week 6)

- All topics fully coded
- All modules connected together
- Testing is done
- Most bugs are fixed
- Almost ready for final submission

Release 3 — Final Version (May 7)

- Fully complete program
- All operators, parsing logic and evaluator functions working correctly
- No known bugs
- Ready for submission

4.2.4 Project Schedule

Project Schedule:

Phase	Tasks	Start	End
<i>Planning</i>	Design structure, assign roles	Week 1	Week 2
<i>Coding</i>	Code parser, CLI, evaluator engine, data structures	Week 3	Week 5
<i>Testing</i>	Test all modules, fix bugs	Week 6	Week 6
<i>Final Review</i>	Final checks, submission	Week 7	May 7

Milestone Schedule:

Milestone	Target Date
<i>Design Document Complete</i>	End of Week 2
<i>Coding Complete</i>	End of Week 5
<i>Demo Release</i>	End of Week 5
<i>Beta Release</i>	End of Week 6
<i>Testing Complete</i>	End of Week 6

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

Final Submission	May 7
-------------------------	-------

Weekly Meeting Schedule:

Meeting	When	Duration
Meeting 1	Week 1	60 mins
Meeting 2	Week 2	30 mins
Meeting 3	Week 3	45 mins
Meeting 4	Week 4	45 mins
Meeting 5	Week 5	45 mins
Meeting 6	Week 6	45 mins

4.2.5 Project Resourcing

Team Members & Roles:

Member	Role	Responsibilities
Shashwat	System Architect	Creates the Design Document, defines data structure for the nodes, and connects front and back-end functions
Alex	Requirements & Documents Lead	Leads Requirements Document, manages documentation version control
Jr	Front End Developer	Builds CLI (command-line user interface), handles string tokenization (parsing user input), and formats the output of results/errors
Zack	Back End Developer	Implements core math logic, handles PEMDAS, builds unary operator support, and manages arithmetic error handling
Lea	Project Manager	Manages project schedule, ensures tasks are completed, updates the project plan, and assembles final deliverables for submission
Alec	Quality Assurance	Creates the Test Plan, compiles test cases, and reviews code for robustness

Skills Required:

Skill	Who Needs It
Object-Oriented C++ Programming	All members
Understanding of Functions	All members
Knowledge of Pointers	Zack
Testing & Debugging	Zack and Alec

Tools Required:

Tool	Purpose
VSCode	Writing code

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

GCC Compiler	Compiling C++ program
GitHub	Storing and sharing code
Google Docs	Writing documentation

Training Required:

Training	Who	Target Date
C++ and Object-Oriented Basics	All members	End of Week 1
GitHub Usage	All members	End of Week 1
Pointers & Memory	Zack	End of Week 2

4.3 Project Monitoring and Control

- Requirements Management:
 - All requirements are based on the Arithmetic Expression Evaluator prompt
 - Any changes to requirements must be agreed upon by all 6 team members
 - Changes are recorded and tracked during weekly meetings
- Quality Control:
 - All code must be reviewed before combining into final program
 - Any bugs found must be fixed before final release
 - Code must follow C++ object-oriented programming standards from the course notes

Check	When	Who
Code Review	End of each iteration	All members
Function Testing	Week 6	Alec

- Reporting and Measurement:
 - Progress is reported at every 30-minute weekly meeting
 - Schedule is updated if any delays occur

Metric	How Often	Who Reports
Tasks completed	Weekly	Lea
Bugs found/fixed	Weekly	Alec
Code progress	Weekly	All Developers

- Risk Management:

Risk	Likelihood	Solution
Member not completing task	Medium	Redistribute work in team

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

<i>Code not working</i>	<i>Medium</i>	<i>Debug together as a team</i>
<i>Running out of time</i>	<i>Low</i>	<i>Start early, follow schedule</i>
<i>Member dropping out</i>	<i>Low</i>	<i>Remaining members share the work</i>

- *Configuration Management:*
 - *All code stored on GitHub*
 - *Each member works on their own branch*
 - *Code is merged during Integration phase (Week 5)*
 - *All documents saved on Google Docs*
 - *Final version submitted on May 7*

4.4 Requirements Management

The requirements for this system are captured in the Requirements Document. Requested changes to requirements are captured in Change Requests and are approved as part of the Configuration Management process.

4.5 Quality Control

Defects will be recorded and tracked as Change Requests, and defect metrics will be gathered (see Reporting and Measurement below).

All deliverables are required to go through the appropriate review process, as described in Section 4.3 Quality Control. The review is required to ensure that each deliverable is of acceptable quality, using guidelines and checklists.

Any defects found during review which are not corrected prior to releasing for integration must be captured as Change Requests so that they are not forgotten.

4.6 Reporting and Measurement

Updated schedule estimates, and metrics summary reports, will be generated at the end of each iteration.

The Minimal Set of Metrics, as described in the RUP Guidelines: Metrics will be gathered on a weekly basis. These include:

Earned value for completed tasks. This is used to re-estimate the schedule and budget for the remainder of the project, and/or to identify need for scope changes.

Total defects open and closed – shown as a trend graph. This is used to help estimate the effort remaining to correct defects.

Acceptance test cases passing – shown as a trend graph. This is used to demonstrate progress to stakeholders.

EECS 348 Group 5	Version: <1.0>
Software Development Plan	Date: 02/22/2026

4.7 Risk Management

Risks will be identified in Inception Phase using the steps identified in the RUP for Small Projects activity “Identify and Assess Risks”. Project risk is evaluated at least once per iteration and documented in this table.

Refer to the Risk Management table in Section 4.3 for detailed information.

4.8 Configuration Management

Appropriate tools will be selected which provide a database of Change Requests and a controlled versioned repository of project artifacts.

All source code, test scripts, and data files are included in baselines. Documentation related to the source code is also included in the baseline, such as design documentation. All customer deliverable artifacts are included in the final baseline of the iteration, including executables.

The Change Requests are reviewed and approved by one member of the project, the Change Control Manager role.

Refer to the GitHub repository for configuration records.

5. Annexes

Concerning programming guidelines, the following will be followed: Consistent coding style and naming conventions, error handling, input validation, operator handling, and documentation.

For design guidelines, the project should use a tree data structure, containing nodes that hold either numeric values or arithmetic operators.

Within design guidelines, there will be testing frameworks that evaluate incoming values for validity, reacting appropriately.

For process guidelines, team members shall use Git to frequently commit changes with meaningful, clear messages to avoid ambiguity. Code pushes to the main branch will be reviewed by at least one other team member to confirm accuracy and efficiency.

Documentation will be kept describing designs and the testing process; documentation will also be kept for milestones (such as implementing tokenizer, implementing parser, etc.). Errors within testing will be logged and reviewed by each team member.

The project will follow the UPEDU process.

Other applicable process plans are listed in the references section, including Programming Guidelines.
